

Remote™ Support in Reason

Version: Reason 6, Reason Essentials and Reason Limited. Also includes legacy support for Record 1.5.

Remote is a protocol for communication between hardware control surfaces and software applications, developed by Propellerhead Software.

1 About this document

This documentation describes all the remotable items in Reason. It is intended as reference material when creating Remote Maps. For more information about Remote, please see the document Remote Codec Developer Documentation.

1.1 About the program versions

There are two different Reason programs available: Reason 6 and Reason Essentials. These use the same Remote files. For Remote Map makers, there is one important difference between the programs: Reason Essentials has a scaled-down main mixer, with fewer parameters. This means that Reason Essentials has separate Remote scopes for the main mixer: "Reason Essentials Main Mixer Channel" and "Reason Essentials Master Section". A complete Remote Map should include main mixer scopes for both Reason and Reason Essentials.

There is also an OEM version of Reason, called Reason Limited. This uses the same remote scopes as Reason Essentials, which means you don't have to care about it.

Finally, Remote also includes three specific scopes for Record 1.5 (discontinued with the release of Reason 6 in 2011). These are "Record Main Mixer Channels", "Record Master Section" and "Record Document". Since these have the exact same items as the corresponding Reason scopes, it's very easy to include legacy Record support in a Remote Map file - just duplicate and rename the corresponding Reason scopes.

2 Remotable items in Reason 6

2.1 Master Keyboard

Remotable Item	Min value	Max value	Input	Output
Keyboard	0	127	Note	-
Pitch Bend	-8192	8191	Value	-
Mod Wheel	0	127	Value	-
Breath	0	127	Value	-
Channel Pressure	0	127	Value	-
Expression	0	127	Value	-
Damper Pedal	0	127	Value	-

2.2 Mixer 14:2

Remotable Item	Min value	Max value	Input	Output
Master Level	0	127	Value	Value

2.11 Dr.REX Loop Player

(Note: Since Record 5, the original Dr.REX Loop Player is replaced by the Dr. Octo REX device. However, the Remote scope name has been kept for compatibility reasons. The remotable item names have also been kept - with the exception of the "Previous/Next Loop" items, which have been replaced with standard "Select Patch" items, and the "Preview" item which has been replaced with "Run". Furthermore, a number of new, Dr. Octo REX-specific remotable items have been added.

Remotable Item	Min value	Max value	Input	Output

Note: the items called "Channel <1-64>" in the table above are remotable items for individual mixer channels. In the actual map file the items will be called "Channel 1 Level", "Channel 2 Level" and so on.

A control surface can control up to 64 mixer channels at the same time. However, typically there is mapping for 8 or 16 channels. The Previous/Next Remote Base Channel items are used for changing which 8 or 16 channels are controlled at a given time.

4 Remotable Items in Record

For compatibility with Record 1.5, it's recommended that the following scopes are included in the Remote Maps (easiest done by duplicating and renaming the corresponding Reason scopes):

4.1 Record Document

This has the same remotable items as the Reason Document scope.

4.2 Record Master Section

This has the same remotable items as the Reason Master Section scope.

4.3 Record Main Mixer Channel

This has the same remotable items as the Reason Main Mixer Channel scope.
